Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: IV.3

The various inventions are as follows:

- The use of a block copolymer, containing phosphate or phosphonate functions, as an adhesion promoter (claim 1);
- The use of a block copolymer, containing phosphate or phosphonate functions, as an anti-corrosion agent (claim 2); and
- 3. An aqueous film-forming composition containing a block copolymer in which the block containing phosphate or phosphonate functions is a homopolymer based on a monomer containing phosphate or phosphonate functions (claim 15).

Said inventions are not so linked as to form a single general inventive concept (PCT Rule 13.1) for the following reasons:

In claim 15, the "special technical feature" that determines a contribution over the prior art of D2 (EP-A-1 156 089) is the fact that the block containing the phosphate groups is a homopolymer (see Box V hereinafter). Use claims 1 and 2 do not contain this or any corresponding feature (PCT Rule 13.2).

Moreover, the concept common to both claims 1 and 2 is the fact that said two claims relate to the use of the same polymer. Since said polymer is known from D2, the

common concept linking these two claims is not novel.	tion of: IV	.3							
	common	concept	linking	these	two	claims	is	not	novel.
									•

v.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
	citations and explanations supporting such statement

Statement			
Novelty (N)	Claims	1, 15	YES
	Claims	2	NO
Inventive step (IS)	Claims	1, 15	YES
	Claims	2	NO
Industrial applicability (IA)	Claims	1-16	YES
•	Claims		NO

2. Citations and explanations

- 1. Novelty and inventive step (PCT Article 33(2) and 33(3)).
- (a) Reference is made to the following documents:
 - D1: US-B1-6 174 953 (HUYBRECHTS JOSEF) 16 January 2001 (2001-01-16);
 - D2: EP-A-1 156 089 (DU PONT) 21 November 2001 (2001-11-21);
 - D3: DE 100 29 694 A (BASF AG) 20 December 2001 (2001-12-20).
- (b) Claim 15 is considered to be novel and inventive.

Document D1 describes block copolymers that can be used in coating compositions. In column 2, lines 39-45, it is explained that monomers containing phosphate or phosphonate functions can optionally be used.

D1 does not describe block copolymers in which the

Document D2 describes block copolymers containing phosphate functions (claims 1, 5 and 13, page 10). In said copolymers, the block containing phosphate functions is not a homopolymer based on a monomer containing phosphate functions. Said block is a copolymer produced by means of a reaction (of hydroxy, epoxy, etc. functions; cf. paragraphs 45-47) with phosphoric acid or the like.

As a result, claim 15 is novel over D2.

(c) Claim 2 is not novel.

D2 relates to metal pigments with enhanced gloss and dispersibility properties. In D2, the phosphate-containing polymer is used to protect the pigment (metal surface) from corrosion: the pigment is passivated to limit the occurrence of oxidation-reduction reactions that generate gas emissions and cause damage to the metal (cf. paragraphs 2-4 and 31). Claim 2 is not, therefore, novel over D2.

(d) Claim 1 is considered to be novel and inventive.

None of the available documents describes or suggests the use of a block copolymer containing phosphate or phosphonate functions as an adhesion promoter.
